

APAO PROMPT LIBRARY

50+ ready-to-use questions for onc/heme PAs - in partnership with APAO

How to use this: copy any prompt, paste it into Vera, and adjust the specifics to your patient. Full sentences and real clinical context get the best answers. Follow up in the same thread to go deeper ("what changes if her GFR is 35?", "now write that as a patient handout").

A note on privacy: enter patient identifiers only if your institution has a signed BAA with Vera. Otherwise describe the case without identifiers.

TBD with APAO leadership - goal would be to cover most use cases

A few examples:

Maximum cumulative dose of doxorubicin before cardiotoxicity risk increases?

Recommended surveillance imaging schedule after curative treatment for stage II colon cancer?

Does metformin interact with capecitabine metabolism?

How is carboplatin dosed using the Calvert formula?

Patient on ibrutinib starting warfarin, what is the interaction and how dangerous?

Antiemetic regimen for a cisplatin-based chemotherapy cycle?

Potential topics:

TREATMENT SELECTION & REGIMEN COMPARISON

DOSING, ADJUSTMENTS & ADMINISTRATION

TOXICITY & ADVERSE-EVENT MANAGEMENT

SUPPORTIVE & SYMPTOM CARE

HEMATOLOGY

GUIDELINES, STAGING & BIOMARKERS

PRIOR AUTHORIZATION & DOCUMENTATION

PATIENT EDUCATION & COMMUNICATION

NOTES, SUMMARIES & WORKFLOW

CALCULATORS & RISK SCORES

SURVIVORSHIP, SCREENING & SPECIAL POPULATIONS
